2.10 POISONING AND OVERDOSE

**BLS Treatment – ALL Poisoning and Overdose Incidents**

- Position of comfort.
- NPO except as noted below.
- Oxygen as indicated.

**ALS Treatment - ALL Poisoning and Overdose Incidents**

- Establish IV/IO, Normal Saline at TKO.
- For nausea / vomiting, may administer Ondansetron.
- Activated Charcoal unless contraindicated (see Reference I: Medication List).

**ALS Treatment - SPECIFIC Poisoning and Overdose Incidents**

**NARCOTICS**

(e.g. Heroin, Demerol, Methadone, Morphine, Fentanyl, Dolophine, Darvocet, Darvon, Propoxyphene, Oxycodone, Oxycontin, Oxyir, Percocet)

Assess for symmetrical, pinpoint pupils, respiratory depression/apnea, decreased level of consciousness, bradycardia, hypotension and decreased muscle tone:
- For suspected overdose with respiratory depression not responsive to BLS airway interventions:
  - Naloxone

**CARBON MONOXIDE**

- Administer high-flow Oxygen via NRB. Assist ventilations with BVM as needed.
- Do NOT withhold Oxygen therapy for patients with respiratory compromise and “normal” pulse oximeter values.
## 2.10 POISONING AND OVERDOSE

### CALCIUM CHANNEL or BETA BLOCKER TOXICITY
*(e.g. Verapamil, Metoprolol)*

Assess for bradycardia, hypotension and shock; apply and assess 12-lead EKG:
- **Activated Charcoal**
- **Calcium Chloride** as indicated for Calcium Channel Blocker overdose.
- **Glucagon** as indicated for Beta Blocker Toxicity.

### TRICYCLIC ANTIDEPRESSANTS
*(e.g. Elavil, Amitriptyline, Etrafon, Pamolor, Nortripyline)*

- **Oxygen** as indicated.
- If SBP <90, seizure, and/or QRS widening > 0.10 seconds is present: **Sodium Bicarbonate**

### ANTIPSYCHOTICS WITH EXTRAPYRAMIDAL REACTION
*(e.g. Haldol, Haloperidol)*

Assess for fixed, deviated gaze to one side of body, painful spasm of trunk or extremity muscles and/or difficulty speaking:
- **Diphenhydramine**

### CYANIDE

Assess for nausea, headache, anxiety, agitation, weakness, muscular trembling, seizures, apnea, soot around mouth or airway:
- Remove contaminated clothing. Do NOT transport with patient.
- Give **Hydroxocobalamin** for suspected overdose and if available.
- Hydroxocobalamin is not routinely stocked on the ambulances, but is available in your provider disaster caches. Transport patient to receiving hospital for treatment if there is any delay in ability to administer **Hydroxocobalamin**.

### ORGANOPHOSPHATES
*(e.g. Malathion)*

Assess for “SLUDGE”: (Salivation, Lacrimation, Urination, Diaphoresis/Diarrhea, Gastric hypermotility, Emesis/Eye (small pupils, blurry vision). Severe exposures may result in decreased level of consciousness, fasciculation/muscle weakness, paralysis, seizures:
- Administer **Atropine** until SLUDGE symptoms subside.
- Treat seizures with **Midazolam**.
2.10 POISONING AND OVERDOSE

NERVE AGENTS
(e.g. VX, Sarin, Soman, Tabun)
Same as signs/symptoms as Organophosphate Poisoning (see above).
- Administer Atropine until SLUDGE symptoms subside.
- If available, administer DuoDote [Atropine/Pralidoxime (2-PAM)] Autoinjector IM in using dosing table below:

<table>
<thead>
<tr>
<th>DuoDote (2-PAM) Dosing Estimator</th>
</tr>
</thead>
<tbody>
<tr>
<td>DuoDote = Atropine 2.1mg / Pralidoxime 600mg</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Do NOT Use Atropine/2-PAM Injector</th>
<th>Use Between 1 – 3 Atropine/2-PAM Injectors IM</th>
<th>Use 3 Atropine/2-PAM Injectors IM</th>
</tr>
</thead>
<tbody>
<tr>
<td>No signs of life</td>
<td>Titrate dose based on 1 or more SLUDGE signs and:</td>
<td>Exhibiting 2 or more SLUDGE signs OR</td>
</tr>
<tr>
<td>Fits non-resuscitation group</td>
<td>• Elderly</td>
<td>• Non-ambulatory</td>
</tr>
<tr>
<td>group (expectant) due to other concomitant injury</td>
<td>• Children appearing under age 14</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Prolonged extrication (may require more than 3 autoinjectors)</td>
<td></td>
</tr>
</tbody>
</table>

Bronchospasm and respiratory secretions are the best acute symptoms to monitor response to Atropine/2-PAM therapy:
- Decreased bronchospasm and respiratory secretions = getting better.
- No change or increased bronchospasm and respiratory secretions = Base Hospital Contact for administration of additional medication, in excess of listed Maximum Dosage.

Comments
- May contact Poison Control at 1-800-222-1222 if substance is unknown.

Base Hospital Contact Criteria
- Contact Base Physician if Poison Control recommends treatment outside of current protocols.
- Suspected Narcotic overdose not responsive to max doses of Naloxone.
- Bradycardia and/or hypotension caused by a CALCIUM CHANNEL BLOCKER: Calcium Chloride.
- Bradycardia and/or hypotension caused by a BETA BLOCKER: Glucagon.
