Release Top Clip
Pull Down Front Access Panel to expose Screen
*The panels can also be accessed through the zippered windows.

On the back of the machine, unzip the lower pocket and turn the device on.

The machine will “sound” and complete a brief self check.
To connect the circuit:

1. Connect the breathing circuit to the gas output connector
2. Connect the larger tube to the proximal line connector
3. Connect the smaller tube to the exhalation valve connector.

A “Circuit Check” must be performed once a new vent circuit is connected.

Select the “Circuit Check” icon on the main screen and prepare to follow the directions.
The “Main Screen” will appear once the circuit check is successfully completed.

To Change Mode:

1. Select the icon displayed below “Mode”. Select this icon again to toggle between different modes.
2. Select the lower icon to toggle between Volume and Pressure Control.

Select “Tidal Volume” to reflect order or protocol. (6-8 ml/kg of ideal body weight)

1. Select “Vt” and use the up/down arrows on the right side of the machine to change the value.
2. Press “Accept” to confirm setting change.
Set Respiratory Rate in the same manner as Vt.

1. Select “RR” by touching the respective box display.
2. Use the Up/Down arrows to select rate.
3. Press “Accept” to confirm setting change.

Select “PEEP” next.

1. Select “PEEP” by touching the respective box display.
2. Use the Up/Down arrows to change the value.
3. Press “Accept” to confirm setting change.
Next, Connect the green Oxygen tubing to the source.

Connect the mixer to ventilator as shown.

* The mixer should not be attached to the ventilator before the circuit check is completed.

Use the control dial on the mixer to select the desired oxygen concentration.

Titrate to maintain a pt. saturation of 95%
**Bi-PAP Setting**

* Mode: SPONT - Pressure Control
* Set PEEP to desired level
* Adjust PS to Target Pressure over PEEP
  * Example: “15 over 5” is equal to PEEP of 5 and PS of 10.
* Adjust P-trig to desired sensitivity.
  * Typical Setting is 2-5.

**CPAP Setting**

* Mode: SPONT - Pressure Control
* Set PEEP to desired level.
* Turn PS off.
* Adjust P-trig to desired sensitivity.
  * Typical Setting is 2-5.
