Follow Initial Protocol for All Patients

**Goals:**
- Maintain adequate perfusion
- Treat underlying cause

**Signs/Symptoms:**
- Altered mental status
- Hemodynamic instability
- Signs of end organ failure

**Documentation Key Points:**
- Rhythm/Rate
- Medications
- Patient Weight
- Treatment of underlying cause

---

**Special Considerations**
- EKG Rhythms included: Sinus bradycardia, Second Degree Heart Block (Mobitz 1 and 2), Third Degree Heart Block, and Ventricular Escape Rhythms
- In cases of impending hemodynamic collapse, go to transcutaneous pacing immediately.
- Possible underlying causes (not limited to): Hypoxia, Shock, Heart Block, Toxin Exposure, Electrolyte Disorder, Hypoglycemia, Increased Intracranial Pressure.
- History of heart transplant or denervated heart - start with epinephrine and/or transcutaneous pacing.

---

**protocol: D4. Pediatric - Bradycardia**

**Date of Most Recent Update:** 6/2020

**Original Adoption Date:** 12/16
