Follow Initial Protocol for All Patients

**Goals:**
- Stop burning
- Maintain perfusion
- Minimize tissue damage

**Signs/Symptoms:**
- Airway - stridor/hoarse voice
- Mouth/nares - redness/soot/singed hairs/blisters
- Breathing - rapid/shallow/wheezing

**Documentation Key Points:**
- Airway Status
- Fluid administered
- Total body surface burned
- Pain scale and management

---

**Special Considerations:**
- Airway burns can rapidly lead to upper airway obstruction and respiratory failure. Voice changes can be first sign.
- Transport should be to a trauma center.

---

**Protocol: F1. Burns**

**Date of Most Recent Update:** 6/2020
