Follow Initial Protocol for All Patients

**Goals:**
- Maintain adequate perfusion
- Control ventricular rate
- Treat underlying causes

**Signs/Symptoms**
- Heart rate >150 bpm
- With signs of end organ failure
- Concern for deterioration

**Documentation Key Points:**
- Rhythm and any changes
- Medications
- Upload from Zoll Monitor
- History of events leading up to

---

**B9. Tachycardia**

**Special Considerations**
- If signs of end organ failure, consider patient to be unstable.
- Seek medical control consultation if necessary.
- Possible causes (not limited to): Hypovolemia, Hypoxia, Acidosis, MI, Electrolyte Imbalance, Hypothermia, Tamponade, Pneumothorax, Thrombus, Trauma
- Utilize extreme caution with Wolff-Parkinson-White Syndrome; consider consulting Medical Control.
